

Weekly Progress Report

Name: Shaad Ali

Company: Jasiq Labs

Week: 23 – 28

Work Summary:

Monday (23): On leave due to Eid.

Tuesday (24): Completed Phase 5 (Page 1–2). Focused on understanding advanced React concepts and improving component structure.

Wednesday (25): Completed Phase 5 (Page 3–4). Learned useReducer and component composition, and how to manage complex state efficiently.

Thursday (26): Covered Phase 4 (Page 6 – Forms and Controlled Inputs). Learned how to handle form data using state and built a contact form with different input types.

Friday (27): Started building an e-commerce frontend project. Set up project structure, created reusable components, implemented product catalog using mock data, and added routing.

Saturday (28): Continued improving the e-commerce project. Integrated Redux Toolkit for global state management, created cart slice, configured store, and implemented “Add to Cart” functionality along with UI improvements.

Learning Outcomes:

- Improved understanding of React hooks (useReducer, useContext)
- Learned global state management using Redux Toolkit
- Built reusable and scalable component architecture
- Implemented routing using React Router
- Gained hands-on experience in building a real-world e-commerce application

Next Plan:

- Complete cart functionality (increase/decrease quantity, remove items)
- Implement wishlist feature
- Add total price calculation
- Optimize performance and prepare for backend integration
